

Scenario B — B03: Drug Network Ablation Reveals Mechanism-Specific KG Utilization for Unseen Test Drugs

**A. Full KG Knockout for KG-Covered Test Drugs
(positive = KG improves prediction; model never saw these drugs)**

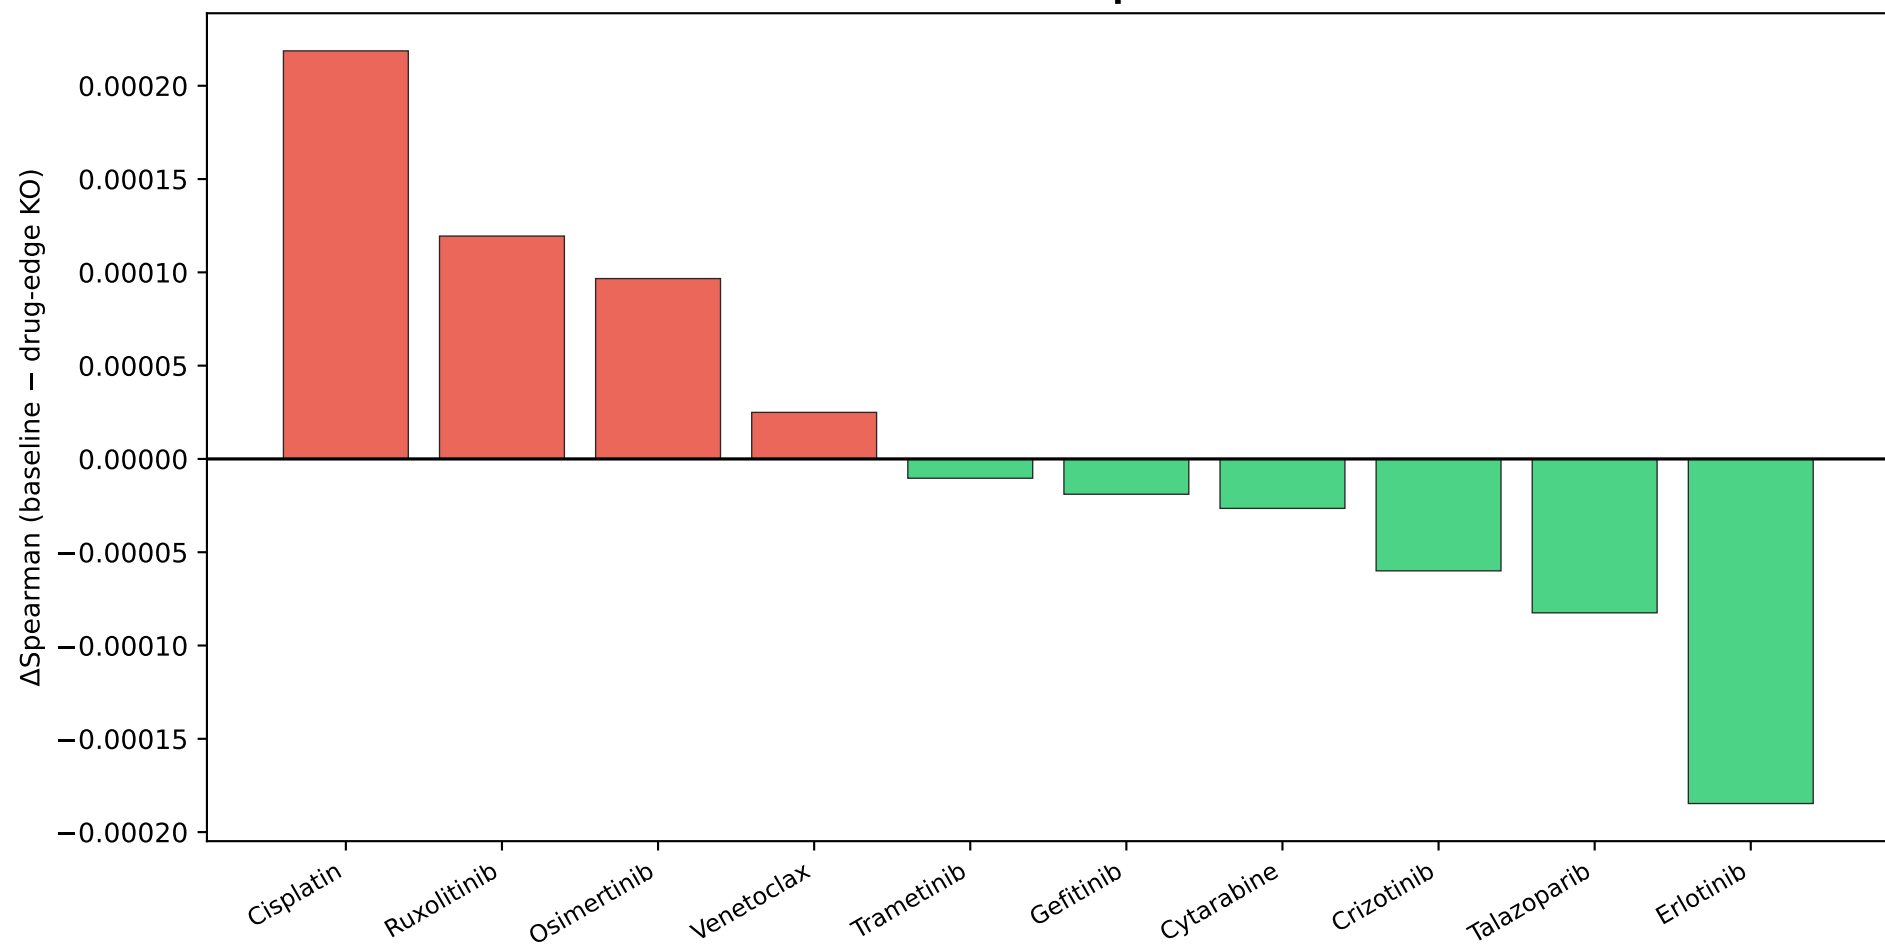

B. Source-Level Ablation

ChEMBL vs PrimeKG (p=0.158)

C. Drug-Specific Edge Ablation (only drug's own KG edges removed)
Demonstrates mechanism-specific KG utilization

D. Cancer-Type-Specific KG Effect (★ = expected cancer type)
