

Scenario B — B05: Drug Repurposing Discovery via KG Attention Mining
World Model Leverages Prior Networks to Predict Cancer-Type Sensitivity

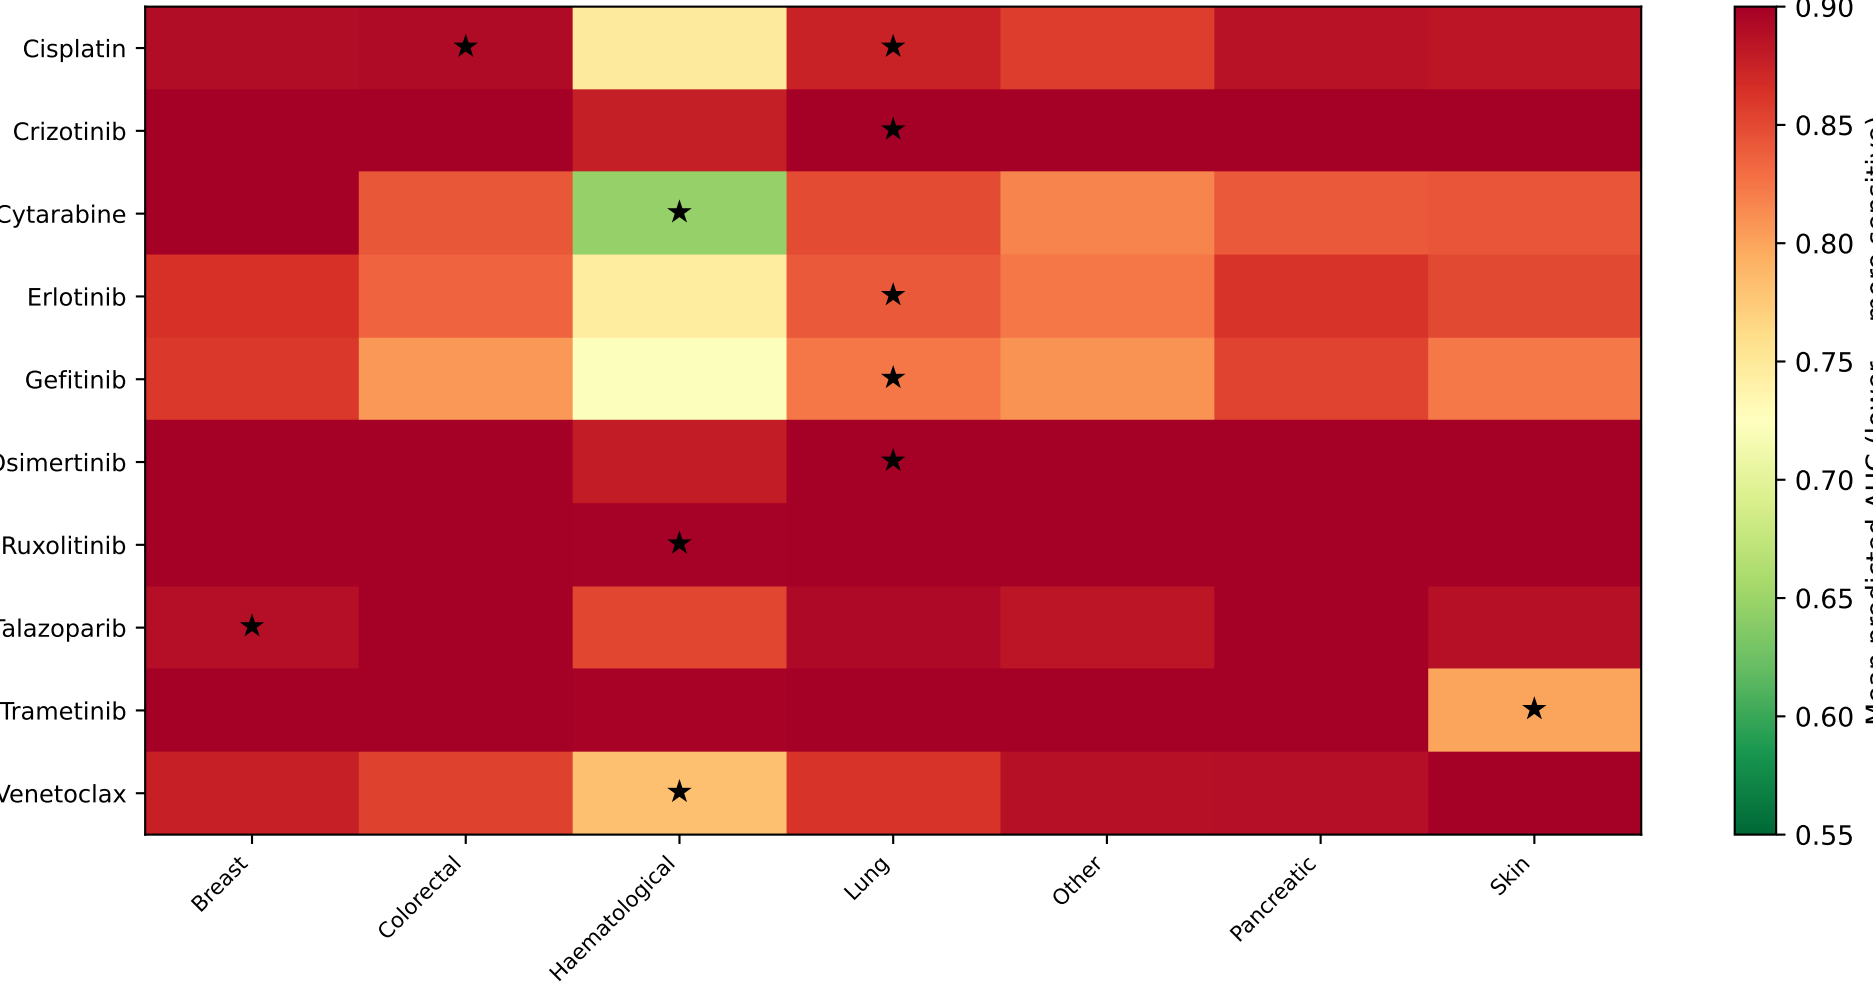

A. KG Attention Profiles for Unseen Test Drugs
(World model dynamically allocates attention to three prior networks)

B. Drug KG Attention Clustering
(Same-family drugs cluster → mechanism learned from KG)

C. KG-Predicted Cancer Type Sensitivity Map
★ = Known clinical indication (validation)

D. Novel Repurposing Candidates
(not known indications)
